## Complete product line for the care of infants & children

The skin is the largest organ of the body as well as the separating barrier, protecting the organism from external attacks. Therefore, it is very important to take good care of its health, even from the very first hours of life.

Children's skin is constantly developing as they grow older, whereas some of its components become fully functional only during puberty. Newborn babies do not have fully developed sweat and sebaceous glands. As a result, their skin becomes dry and more vulnerable to infections caused by germs, bacteria, and pollutants. This is the reason why infants often demonstrate skin irritations and eczema during their first year of life without, however, necessarily suffering from a certain skin disease. Moreover, the absence of the basic protective layer, which develops after the eighth year of age and is finalized during adolescence, makes infant skin more sensitive.

MACROVITA has created the new HIPPO product line with the utmost respect for the specialized skin needs of infants and children, combined with the latest results of modern scientific research. With sophisticated combinations of vegetable oils, extracts, and vitamins, as always inspired by nature, the products of the line are very gentle and particularly safe for the sensitive skin of our young friends. Dermatologically tested on sensitive skin, hypoallergenic\*, with natural ingredients up to 97%.

## Vegetable cosmetic oils with vitamin E

The traditional cosmetic use of vegetable oils lasts for centuries now, as their beneficial effect on the skin has been proven empirically. The wealth of their nutritive and softening ingredients makes them ideal for maintaining skin's health, since they offer the necessary nourishment and hydration. Absolutely pure, they do not cause irritations and are safe to use directly on the skin or as carriers of essential oils for various kinds of massage.

MACROVITA vegetable cosmetic oils are products with a particularly simple composition. They encapsulate the beneficial properties of plants and transfer them intact to the face, body, and hair. Produced by cold pressing, in order to avoid the destruction of their valuable ingredients from heat, they are enriched with vitamin E for protection against oxidation and are packaged in dark blue glass containers for elimination of UV radiation adverse effects. They can be used individually, blended together or with essential oils, or even with other cosmetic preparations.
